# ❖ 1 Introduction

## 1.1 Overview

A VoIP GSM Gateway (MoIP Gateway) is a device which reduces costs when Send SMSing from a fixed telephone line to mobile network. It enables direct routing between IP, digital, analog and mobile networks.

MoIP Gateway is now used more and more for telephone carriers to land their IP Send SMS to mobile network. In those areas where fixed line services are unavailable or much more expensive than the mobile cost, MoIP Gateway is an irreplaceable alternative.

The following figure shows a basic topology of MoIP Gateway usage.

## 1.2 Glossary

- VoIP: Voice over Internet Protocol.
- SIP: Session Initial Protocol.
- DTMF: Dual Tone Multiple Frequency.
- IMEI: International Mobile Equipment Identity (with 15 digits).
- ASR: Answer Seizure Ratio.
- ACD: Average Send SMS Duration.
- PDD: Post Dial Delay.
- LCR: Least Cost Routing.
- USSD: Unstructured Supplementary Service Data. GSM: Global System Communications.
- CDMA: Code Division Multiple Access.
- WCDMA: Wideband Code Division Multiple Access.
- CDMA: Code Division Multiple Access
- LTE(FDD-LTE TDD-LTE): Long Term Evolution
- SMPP: Short Message Peer-to-Peer Protocol, It is one of the standard protocols for the external access interface of the short message service center system

## ❖ 2 Equipment Information

### 2.1 Product Brief

YX series MoIP Gateway is a multi-functional and high performance product, which is designed with advanced embedded technology. YX series is able to process traditional SMS service with internet communication service.

YX series MoIP Gateway please check the following table about the difference:

Model Number	Channel	Sim capacity in each channel	Total sim capacity	Frequency(optional)
YX MoIP 4-4	4	1	4	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 8-8p	8	1	8	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 8-8s	8	1	8	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 8-32	8	4	32	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 16-16	16	1	16	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 16-64	16	4	64	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 16-128	16	8	128	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 16-256	16	16	256	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 16-512	16	32	512	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 32-32	32	1	32	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 32-64	32	2(1 Big+1 Small)	64	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 32-128	32	4	128	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 32-256	32	8	256	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 32-512	32	16	512	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 64-64	64	1	64	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 64-256	64	4	256	GSM / CDMA / WCDMA / 4G(LTE)
YX MoIP 64-512	64	8	512	GSM / CDMA / WCDMA / 4G(LTE)

### 2.2 Appearance

- 4/8/16/32/64 Antennas
- 1 USB Serial Port (Baudrate 115200)
- 1 Network Interface (RJ45)
- 1 Power Interface (DC 12V 3A/5A/7.5A/8A)
- 1 Power light
- 1 Reset Button
- 4/8/16/32/64/128/256/512 SIM card slots
- 4/8/16/32/64/128/256/512 LED lights

## 2.3 Special Features

- BO(Bandwidth Optimization)
- Support SIM Bank
- VPN(pptp)
- SIM Card Rotating
  - ◆ SIM card check and switch rules:
    - ◇ Consecutive GSM Release Cause Checking
    - ◇ Accumulated SMS Count Checking
    - ◇ Accumulated Failed SMS Count Checking
    - ◇ Consecutive Failed SMS Count Checking
    - ◇ Accumulated Received SMS Count Checking
    - ◇ Reasons for SMS module error
    - ◇ Port Inter Call Checking
- Station intelligent switching(By switching rules)
- ERMS(Easement Remote Management System)
- Web Browser: Firefox/Chrome /IE/Opera

## 2.4 Specification

<b>Number of Channels</b>	4 channels 4 SIM slots 8 channels 8/32 SIM slots 16 channels 16/64/128/256/512 SIM slots 32 channels 32/128/256/512 SIM slots 64 channels 64/256/512 SIM slots
<b>Frequency</b>	GSM, CDMA, WCDMA, LTE(When purchasing 3G or 4G equipment, please confirm the frequency band and module with the account manager!)
<b>SMS Specification</b>	SMPP3.4
<b>Network Protocols</b>	DHCP/PPPoE/VPN(pptp)
<b>Telephony Features</b>	Hot-line Send SMS ,Dial plan, Speed dial, Phone book, CDR, LCR, White/Black list
<b>Number of Ports</b>	1 WAN 10/100Base-T Ethernet(RJ-45 connector) 1 Console(USB)
<b>LED</b>	1 Power and 4/8/16/32/64groups of card online and running status indicator
<b>Power Supply</b>	100-240VAC, 50 - 60 Hz IN, 12VDC 3A/5A/7.5A/8A Out
<b>Operating</b>	Operating temperature: 0 - 50°C
<b>Warranty</b>	12 Months

## 2.5 Mobile Features

- SMS Send, Receive and Forward(GSM/SIP/HTTP)
- SMS Inbox
- AT Command , USSD
- SMS Format: PDU/TXT
- PIN Code Management
- Carrier Selection

## 2.6 Maintenance and Management

- Multi-language Interface
- USB Serial COM
- Configuration Backup and Restore
- Support HTTP/TFTP Upgrade
- WEB Remote Management System
- SMPP support
- HTTP Command

## ❖ 3 Equipment Installation

This chapter describes how to install a new MoIP Gateway to a physical network environment, how to initialize it and start it in a proper way.

### 3.1 Network Setup

Network is a prerequisite to install MoIP Gateway. The following figure shows the topology of Network with a VoIP Gateway connected.(No LAN port)

## 3.2 Equipment IP Address

The default IP of MoIP Gateway WAN port is 192.168.1.10, while the default LAN port IP is 10.10.10.1(The Version not up the LAN port).

## 3.3 Equipment Connection

Follow the steps below to install the MoIP Gateway to Network.

- 1) Fix the antenna to the MoIP Gateway. (Optional)
- 2) Insert SIM card(s) to slots.
- 3) Connect an Ethernet Cable to the WAN port of MoIP Gateway. The other end of the Ethernet Cable should be connected to Network port of route or switch.
- 4) Connect an Ethernet Cable to the Network port of MoIP Gateway. The other end of the Ethernet Cable should be connected to PC or other network device. (Optional)
- 5) Plug in the MoIP Gateway.

## 3.4 LED Indicators

There are a set of LED lights in the front of MoIP Gateway. Lights will be on or glittering when the MoIP Gateway is power on and running. The following table describes various meanings of status corresponding to LED lights in different display color.

Power	It indicates whether the system is running or not.
Lock card	That one Card slot light flashing(0.5s/times)
No balance/ Send SMS Duration Limit/ SMS Control (Meet these conditions when the lock card)	That one Card slot light flashing(2s/times)
The device did not start successfully	All slot lights keep bright

## ❖ 4 Web Settings

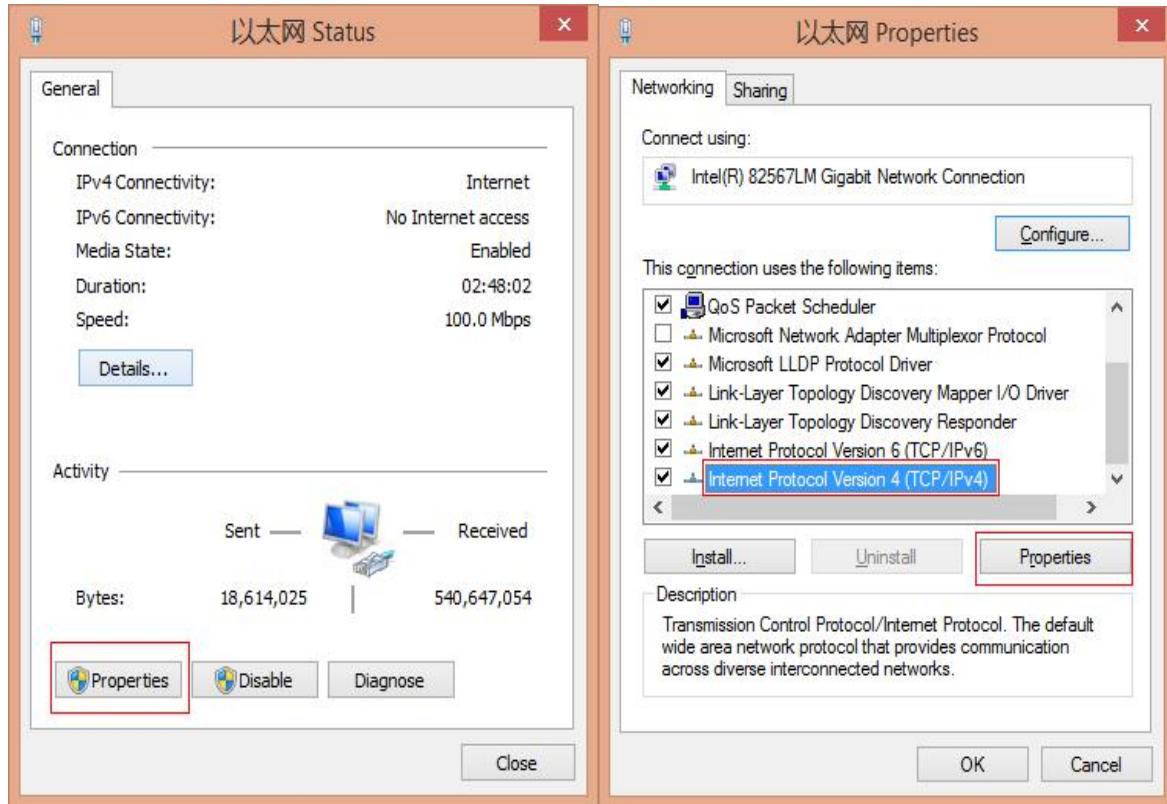

This chapter describes how to set up MoIP Gateway through Web Page. There is a built-in web server which can be accessed at URL: [http://GATEWAY\\_IP/](http://GATEWAY_IP/), while GATEWAY\_IP is the WAN IP address of the MoIP Gateway, such as 192.168.1.10.

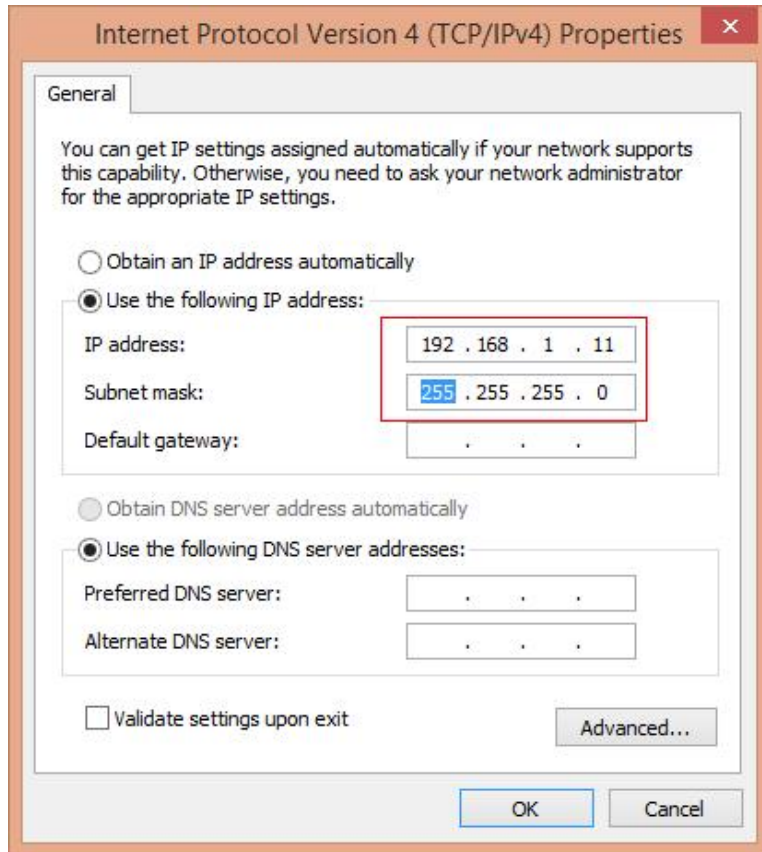

As an example, the following introduction will base on the MoIP Gateway with WAN IP 192.168.1.10.

## 4.1 Login

First, connect a computer to the same LAN with MoIP, add the MoIP IP segment in the computer.

If your computer's IP address is not 192.168.1. XXX, how to change:

Save it

Open web browser and access URL <http://192.168.1.10>. The default login page will be displayed as following.

CN | EN

The default login account and password are:

Account	root
Password	root

It is recommended to use IE/FireFox/Chrome to access the web pages. After successfully logged in, the main page to set Gateway is as following:

More Easy-communication

Path: Guider->Initial Setting Refresh

**WAN Settings**

Dynamic IP

Static IP

WAN IP:

IP Mask:

Default Gateway:

## ❖ 5 Guider

Guider will be described in this paragraph. The most frequently modified parameters and most of the individual parameters are listed in this page.

GoIP32/128 Version: 4.6.0.788 CN | EN

More Easy-communication

Path: Guider->Initial Setting Refresh

**WAN Settings**

Dynamic IP

Static IP

WAN IP:

IP Mask:

Default Gateway:

WAN port is to connect to switch or route then you can use PC that on the same LAN network to login. There's three types of wan connect.

**Static IP:** You can set WAN IP, IP Mask, Default Gateway and DNS Server of WAN port to connect the Internet.

**Dynamic IP:** You can get IP address ,IP Mask ,Default Gateway and DNS Server dynamically from your DHCP server.

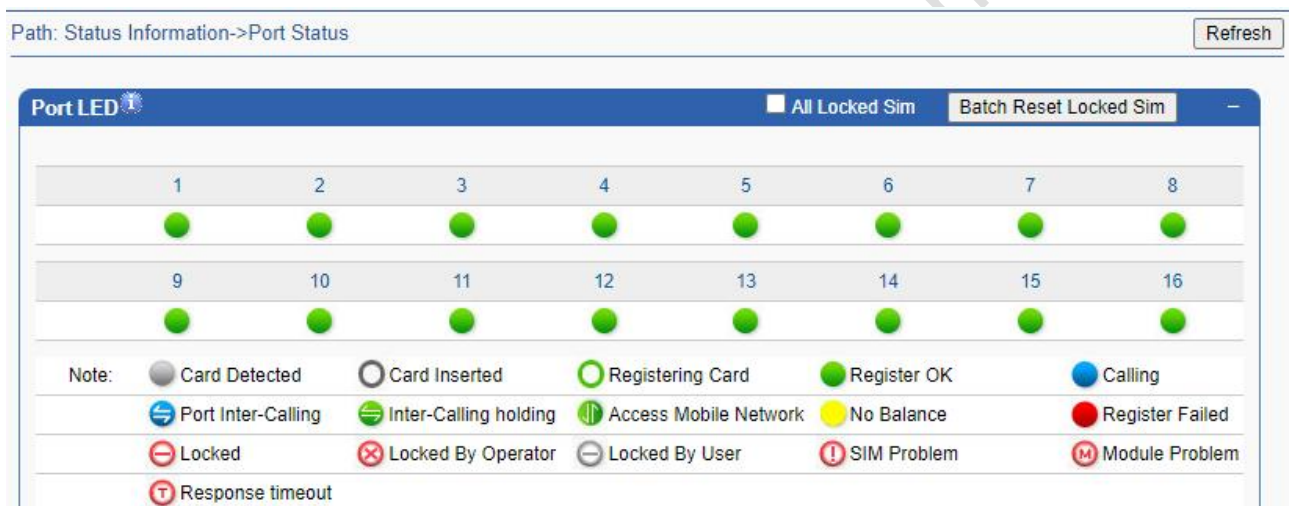

**PPPoE:** In this mode,you can use MoIP device to dial-up network. You can set User Name and Password which you get from your ISP. And you also can set MTU and Service Name.

## ❖ 6 Status Information

### 6.1 Port Status

#### 6.1.1 Port Status

The screenshot below shows the port status.

LED A/B/C/D(.01-.16) displays in accordance with the lights on the front board of MoIP Gateway. Port 1 to 4/8/16/32/64 relate to the physical port of MoIP Gateway. The following table shows the relationship between LED color and port status.( When registering a card, the description of the card may not be displayed in real time. Please refer to the information displayed on the icon)

### 6.2 Device Status

The screenshot below shows the SIP and Module status.

SIP Status			
PortNo.	Registration Status	Module Status	IMEI
1	Ready	Yes	865328020699475
2		Yes	865328020694914
3		Yes	865328020695382
4		Yes	865328020694575
5		Yes	865328020731336
6		Yes	865328020729645
7		Yes	865328020725965
8		Yes	865328020730353
9		Yes	865328020693411
10		Yes	865328020700661

The status columns are specified as following:

- Port No: The physical port sequence from 1 to 4/8/16/32/64.
- Registration Status: Shows the port registration to SIP server information status.
- Module Status: Shows the port Module use status(Yes/No). If NO is displayed, please try restarting. If still, Please contact YX NOC
- IMEI: Specify the port current using of IMEI.

## 6.3 System Status

The screenshot below shows the system status. It includes WAN status, LAN (please ignore) and others. The reported information can help you get the system status detail in a fast, simple way.

WAN Status	
Connection Mode: Static	Connection Status: Connected
IP: 192.168.1.10	Default Gateway: 192.168.1.1
DNS Server IP: 192.168.1.1	MAC Address: 00-32-f1-00-57-f9

LAN Status	
IP: 10.10.10.1	IP Mask: 255.255.255.0
DHCP Server Status: Enabled	

Other Status	
Current Time: 2017-12-02 16:48:07 +8:00	Running Time: 6 Hr 18 Min 27 Sec
Hardware Version: 5.2.0.2.5	Firmware Version: 0.3.7
Software Version: 516-476-829-041-100-070	Released Time: Jan 20 2017 11:36:09 r3830

## 6.4 Traffic Statistics

This is used to count the internet traffic of the card in use

Traffic Statistics							
Data List							
<input type="checkbox"/>	Port	Total Flow	Day flow	Last 24 hour traffic	Last hour traffic	Recent Internet traffic	Last visit URL
<input type="checkbox"/>	1B	0	0	0	0	0	
<input type="checkbox"/>	2A	0	0	0	0	0	
<input type="checkbox"/>	3A	0	0	0	0	0	

## 6.5 Media Statistics

Here statistics IP network media and traffic data situation

Media Statistics								
Data List								
<input type="checkbox"/>	Port	Codec	Remote IP:Port	Local Port	Tx pkts/Bytes	Tx Rate/Bytes	Rx pkts/Bytes	Rx Rate/Bytes
<input type="checkbox"/>	1B	G729	72.11.140.170:600 28	16868	1209 / 89466	49 / 3.5KB/s	1164 / 86136	51 / 3.7KB/s
<input type="checkbox"/>	2A		0.0.0.0:0	0	0 / 0	0 / 0B/s	0 / 0	0 / 0B/s
<input type="checkbox"/>	3A		0.0.0.0:0	0	0 / 0	0 / 0B/s	0 / 0	0 / 0B/s
<input type="checkbox"/>	4C	G729	72.11.140.170:601 00	16874	1184 / 87520	50 / 3.6KB/s	1165 / 86210	49 / 3.5KB/s

## 6.6 SMS Statistics

Here Statistics SMS send and receive, send failure and success of the situation

SMS Statistics									
Data List									
<input type="checkbox"/>	Port	SIM Status	Received	Sent	Sent OK	Send Failed	Con. Failed	Sending	Success Rate
<input type="checkbox"/>	Total		73	76	55	21	0	0	72.37%
<input type="checkbox"/>	1B		2	3	1	2	0	0	33.33%
<input type="checkbox"/>	2A								

## 6.7 Inter Call Statistics

Path: Status Information->InterCall Statistics Refresh

Inter-Calling Statistics									
Port	State	Duration	Inc. Calls	Out. Calls	Success	Failed	Rcvd SMS	Sent SMS	Descriptions
1B	IDLE		0	0	0	0	0	0	
2A	IDLE		0	0	0	0	0	0	
3A	IDLE		0	0	0	0	0	0	

The status columns are specified as following:

- Port No: The physical port sequence from 1 to 4/8/16/32/64.
- State: Specify the Send SMS status.
- Duration: Specify the Send SMS duration.
- Inc Send SMS: Specify the total incoming Send SMS since the last start up of Inter calling system.
- Out Send SMS: Specify the total outgoing Send SMS since the last start up of the Inter calling system.
- Success: The number of successes in Inter calling
- Failed: The number of failed in Inter calling
- Rcvd SMS: Specify the total received SMS since the last start up of the system.
- Sent SMS: Specify the total sent SMS since the last start up of the system.
- Descriptions: Specify the card status.

## ❖ 7 Gateway Settings

### 7.1 Network Settings

The screenshot below shows the operation mode to set VPN settings, and the protocol of vpn is PPTP & OoenVPN.

**PPTP-VPN Settings**

VPN Support:  \* Support the PPTP-VPN

Server Address:

Username:

Password:

Local IP:

Remote IP:

Fields are specified as following:

- VPN Support: Whether support VPN or not.
- Server Address: Specify the VPN server address.

- Username: Specify the username of VPN.
- Password: Specify the password of VPN.
- Local IP: The VPN client ip.
- Remote IP: The VPN remote ip

Network Management Settings

Web Port:  Telnet Port:

The default port of web server is 80. The field Web Port is used to set another different port for web server. For example, if field Web Port is set to 8080 and wan IP is 192.168.1.10, the web pages then should be accessed through URL: http://192.168.1.10:8080 from this computer.

The field Telnet Port is used to change the default port of telnet service.

## 7.2 SIP Setting

Path: Gateway Settings->SIP Setting

**Advanced Settings**

Forbid GSM Call  Enabled \* excluding white list numbers

GSM Auto Answer  Enable

Auto Answer Time:  \* Secs

This function is used to handle the telephone function of incoming calls to MOIP devices

## 7.3 Port Setting

### 7.3.1 USSD Operations

The screenshot below shows the operation mode of USSD operation to MoIP Gateway.

Port	Status	Content	Operation
1A	●	[10-04 00:21:19] USSD is sent, please wait ...	
1B	●		
1C	●		
1D	●		
2A	●	[10-04 00:21:19] USSD is sent, please wait ...	
2B	●		
2C	●		
2D	●		
3A	●	[10-04 00:21:19] USSD is sent, please wait ...	
3B	●		

Fields are specified as following:

- Select port: Choose some or all port to execute AT or USSD command.
- At Command: You can enter AT command then execute to the port which you select.
- USSD Command: Enter USSD query command.
- Time Interval: Query balance regularly.
- Manually Send SMS: Manually input a number, let the sim card mark a Send SMS

### 7.3.2 Base Settings

The screenshot below shows the operation mode to set Basic Settings of Port settings

It's for choosing the frequency(Auto/2G/3G/4G) band and whether register type(Voice/Data), VoLTE enabled or not(Auto/Disabled/Forced). When the gateway can't detect the SIM and you sure the install SIM is right, we need to enable Unnormal SIM Support.

### 7.3.3 Hardware properties

The screenshot below shows the operation mode to set Hardware properties.

PortNo.	Type	Disable	Bind SIM Card	InputVol	OutputVol	Balance	Operations
1	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
2	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
3	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
4	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
5	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
6	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
7	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
8	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
9	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>
10	GSM	<input type="checkbox"/>	<input checked="" type="checkbox"/> A <input checked="" type="checkbox"/> B <input checked="" type="checkbox"/> C <input checked="" type="checkbox"/> D	0	12	0.00	Restart More>>

Hotline: \_\_\_\_\_ Unconditional Forward: \_\_\_\_\_  
 Busy Forward: \_\_\_\_\_ NoAnswer Forward: \_\_\_\_\_

The columns are specified as following:

- Port No: The MoIP Gateway mobile port. Each port contains one or four card slots. Port No starts from 1 to 64.
- Type: Values are GSM/CDMA/WCDMA. (According to your module.)
- Disable: Specify whether enable or disable this port.
- Bind SIM Card: The SIM card that not bind will be locked by gateway.
- Input Volume: Specify the input voice volume of this port.
- Output Volume: Specify the output voice volume of this port.
- Balance: Shows the current balance of sim card
- Operations:
  - ◆ Restart: Restart the module
  - ◆ More:
    - ◇ Hot-line: Specify a sip phone on the SMS platform to pick up the incoming Send SMS
    - ◇ Unconditional Forward/ No Answer Forward Number/ Busy Forward: These parameters are designed to be used with a third party system.

## 7.4 Basic Station(3G/4G devices do not have this function)

### 7.4.1 Basic Settings

The screenshot below shows the operation mode to set globally for base settings.

**Basic Settings**

Max Channels:

Lowest Valid Signal:  dbm

Switch Period:  Minutes

Base Balancing:  Disable  Enable

Fields are specified as following:

- Max Channels: Specify the max base stations
- Lowest Valid Signal: Specify the lowest valid signal
- Switch period: Specify the period of switching base station
- Base Balancing: Specify whether enable base balancing, we suggest disable it.

## 7.4.2 Base stations Settings/Operations

The screenshot below shows the operation mode to set base stations settings and operations

Port No	Base Selection	Base Station	White List	Black List	Operations
1	Auto	642	<input type="text"/>	<input type="text"/>	<input type="button" value="Refresh"/>
2	Auto	122	<input type="text"/>	<input type="text"/>	<input type="button" value="Refresh"/>
3	Poll	111	<input type="text"/>	<input type="text"/>	<input type="button" value="Refresh"/>

### Add New

Click button Add New to expand the data input area to add new data. Fields are specified as following:

- **Data Status:** Mark the status of current data record. Option values are Add/Edit. Value Add means the data is new while value Edit means the data is old.
- **IMEI Start:** Specify an initial IMEI value for the IMEI group, You need to enter the first 14 digits of the IMEI. The device will automation Send SMS complete the last check digit, and randomly generate IMEI from this IMEI begin.
- **IMEI Size:** Specify the number of IMEI backwards generated from the beginning

Click button Submit on the right to save the new data record.

### Edit

All the records are displayed in list. Two operations are provided on the right of each record. Click Edit to expand the current data record to Data Detail Area which is above the Data List.

Click button Submit on the right to save the old data record.

### Delete

Click Delete on the right of each record to delete the current record. A message box will be popped for delete confirmation.

**Get IMEI From Server:** Get IMEI from server, needs to be used with SIM Server and set on SIM Server

## 7.6 SIM Settings

### SIM Schedule

Begin	End	SIM Slots																																Oper.
00:00	08:30	<input checked="" type="checkbox"/> 01	<input checked="" type="checkbox"/> 02	<input checked="" type="checkbox"/> 03	<input checked="" type="checkbox"/> 04	<input checked="" type="checkbox"/> 05	<input checked="" type="checkbox"/> 06	<input checked="" type="checkbox"/> 07	<input checked="" type="checkbox"/> 08	<input checked="" type="checkbox"/> 09	<input checked="" type="checkbox"/> 10	<input checked="" type="checkbox"/> 11	<input checked="" type="checkbox"/> 12	<input checked="" type="checkbox"/> 13	<input checked="" type="checkbox"/> 14	<input checked="" type="checkbox"/> 15	<input checked="" type="checkbox"/> 16	<input checked="" type="checkbox"/> 17	<input checked="" type="checkbox"/> 18	<input checked="" type="checkbox"/> 19	<input checked="" type="checkbox"/> 20	<input checked="" type="checkbox"/> 21	<input checked="" type="checkbox"/> 22	<input checked="" type="checkbox"/> 23	<input checked="" type="checkbox"/> 24	<input checked="" type="checkbox"/> 25	<input checked="" type="checkbox"/> 26	<input checked="" type="checkbox"/> 27	<input checked="" type="checkbox"/> 28	<input checked="" type="checkbox"/> 29	<input checked="" type="checkbox"/> 30	<input checked="" type="checkbox"/> 31	<input checked="" type="checkbox"/> 32	[Delete e]

This function is used to set the SIM card usage policy, for example, As shown, it means that these SIM cards will be used between time: 00:00-8:30 .

## 7.7 Mobile Setting

### 7.7.1 PIN Setting

The screenshot below shows the operation mode to set globally for PIN settings

Fields are specified as following:

- PIN Unblock: Specify whether enable the pin unblock.
- Port: starts from 1 to 64
- PIN: Specify the PIN for card A/B/C/D/(more) of the port

### 7.7.2 Billing Setting

The screenshot below shows the operation mode to set MoIP billing. A smart billing server for mobile port is embedded in MoIP Gateway.

**Billing Setting**

Billing *i*:  Disabled  Enabled

Hangup The Call *i*:  Disabled  Enabled \* When the balance is not enough.

USSD Check:  Disabled  Enabled

Auto Query Balance *i*:  \* Minutes, the period of sending USSD query command.

---

When balance warning send SMS  to

Fields are specified as following:

- Billing: Not Support.
- Hangup The Send SMS: Specify whether enable hangup the Send SMS when balance is ont enough. When select enable, the Send SMS will be hang up immediately when run out of balance. But when you select disable the Send SMS will not be hangup.
- USSD Check: Specify whether enable to get balance through USSD check or not. This field takes effect only when MoIP Billing is set to Enabled.
- Auto Query Balance: Query USSD at fixed time intervals.

The screenshot below shows the operation mode to set Caution Balances, Invalid Balances and The provider ID is detected by MoIP Gateway automation Send SMS/USSD. For a new Gateway without any card inserted, there may be no records in the two lists.

**Provider List**

Index	Provider ID	Name	Query Method	Caution Balances <i>i</i>	Invalid Balances <i>i</i>
1	502152	Yes 4G Yes 4G	SMS ▼	2.00	0.56
2	50212	U Mobile	USSD ▼	0.70	0.14
3	50216	Digi Digi	USSD ▼	0.00	0.00
4	50218	U Mobile	USSD ▼	0.70	0.14

Provider ID: Carrier code, different operators can be set separately

Query Method: USSD/SMS, If you set USSD, please set USSD Query Keyword List , If you set SMS, please set SMS Query Keyword List.

Caution Balances: The device calculates the balance automation Send SMS/USSD by billing, and when the forewarning balance is reached, the balance will be queried once to calibrate the balance(Usually set the balance of 1 minute)

Invalid Balances: Balance after calibration, the implementation of automatic calculation of the balance again, when less than the invalid value will lock, and prompts you(Usually set the balance of 1 minute)

### 7.7.3 USSD/SMS Query Keyword List

**USSD Query Keyword List**

Index	Provider ID	Query Command	Balance Keywords	Invalid Balance Keywords	Invalid SIM Keywords
1	502152	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
2	50212	*118#	Bal: RM	<input type="text"/>	<input type="text"/>
3	50216	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
4	50218	*118#	Bal: RM	<input type="text"/>	<input type="text"/>

  

**SMS Query Keyword List**

Index	Operator ID	Send Num	Recv Num	Query Cmd	Balance Keys	Inval Bal Keys	Inval SIM Keys
1	502152	0183301111	0183301111	Bal	Bal: RM	<input type="text"/>	<input type="text"/>
2	50212	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
3	50216	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
4	50218	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

Fields are specified as following:

- Provider ID: Carrier code, different operators can be set separately.
- Query Command: Specify the query command (If you do not know, please consult your operator)
- Balance Keywords: Please fill in the USSD or SMS sent query command, in the message returned by the operator, the front character of the balance value, As shown:

The balance read will be displayed in the Send SMS status, After setting, you need to save and reboot to take effect.

- Invalid Balance Keywords: If the device recognizes this keywords from USSD/SMS, it will lock the SIM card and prompt no balance.
- Invalid SIM keywords: If the device recognizes this keywords from USSD/SMS, it will lock the SIM card and prompt blocked by operator

## 7.8 USSD Setting

The screenshot below shows the operation mode to send USSD through the MoIP Gateway.

## 7.8.1 USSD Auto Send

Here set USSD can be automation Send SMS sent as needed(For example, you can customize a preferential voice package by automatic USSD)

The screenshot shows a configuration window titled "USSD Auto Send". It contains several rows of settings, each with a radio button to select the trigger type:

- By Dur. Min Minutes: 0 Max Minutes: 0 USSD: [text box]
- By Call Dur. Dur. Minutes: 0 Billing Prd(S): 60 USSD: [text box]  Drop
- By Schedule1 Begin Time: 00:00 End Time: 00:00 USSD: [text box]  Drop
- By Schedule2 Begin Time: 00:00 End Time: 00:00 USSD: [text box]  Drop
- By Schedule3 Begin Time: 00:00 End Time: 00:00 USSD: [text box]  Drop

At the bottom right, there are "Submit" and "Reset" buttons.

By Dur.: Automatic timed send.

By Send SMS Dur.: Automatic send according to the Send SMS time.

By Schedule1/2/3: Send USSD within the specified time.

Drop: When enabled, hang up Send SMSing automation Send SMS when conditions are met.

## 7.8.2 USSD List

The screenshot shows a window titled "USSD List". At the top, there is a "USSD Command" input field containing "\*123#" and a "Copy" button. To the right are buttons for "Show Current", "Show All SIM", "Clear Data", and "Send".

Below is a table with columns: Port, Status, Command, Response, and Operations.

Port	Status	Command	Response	Operations
<input type="checkbox"/> 1A	<span style="color: green;">●</span>	[text box]	10-03 23:13:29 Balance: 47.35 Free Calls: 0 mins Data: 49MB Free SMS E-E: 50 To get a detailed usage report, pls dial #1341# (Charge: Rs.1)	<input type="button" value="Send"/>
<input type="checkbox"/> 2A	<span style="color: green;">●</span>	[text box]	10-04 03:44:20 Balance: 71.40 Free Calls: 0 mins	<input type="button" value="Send"/>
<input type="checkbox"/> 3B	<span style="color: green;">●</span>	[text box]	10-04 03:44:19 Balance: 114.24 Free Calls: 0 mins	<input type="button" value="Send"/>
<input type="checkbox"/> 4A	<span style="color: green;">●</span>	[text box]	10-04 03:44:19 Balance: 219.70 Free Calls: 0 Mins	<input type="button" value="Send"/>
<input type="checkbox"/> 5A	<span style="color: green;">●</span>	[text box]	10-04 03:44:19 Your Balance - Rs. 85.85 To get a detailed usage report, pls dial #1341#	<input type="button" value="Send"/>
<input type="checkbox"/> 6B	<span style="color: green;">●</span>	[text box]	10-04 03:44:19 Balance: 120.49 Free Calls: 0 Mins	<input type="button" value="Send"/>

Fields are specified as following:

- USSD Command: The value of the USSD
- Port: Select tick to need send USSD ports

- Response: Show respond to the content of the carrier
- Send: Press this button, will start sending USSD

## 7.9 Automation

### 7.9.1 Scheduled Sending SMS

SMS Warning: A SMS warn the gateway manager to check the SIMs when they are locked(Not mobile operator blocking, it's the politic schedule to limit the SIM use time, use frequency to avoid blocking).

### 7.9.2 SIM Online Time Checking

Drop Send SMS: Enabled, the online time to meet the conditions, immediately hang up. Not enabled, it will wait for this Send SMS done.

Locking Duration: Here to set the card slot lock time, fill -1 means always locked that when you manually replace the SIM card will reset

### 7.9.14 Accumulated SMS Count Checking

Accumulated SMS Count: The card that is in use takes effect when the number of issued SMS reaches this value

Other : Please refer to 7.11.4 for instructions

### 7.9.15 Accumulated Failed SMS Count Checking

**Accumulated Failed SMS Count Checking**

---

Enable or Not:  Enable

Reset When Switching:  Enable \* Reset the condition when switching to next SIM card.

USSD Query:  Enable \* Send USSD query command before switching.

Failed SMS Count:

Locking Duration:  \* Seconds, 0 means no lock while -1 means permanent lock.

Failed SMS Count: The card in use takes effect when the cumulative number of SMS failures has reached this value

Other : Please refer to 7.11.4 for instructions

### 7.9.16 Consecutive Failed SMS Count Checking

**Consecutive Failed SMS Count Checking**

---

Enable or Not:  Enable

Reset When Switching:  Enable \* Reset the condition when switching to next SIM card.

USSD Query:  Enable \* Send USSD query command before switching.

Consecutive Failed SMS:

Locking Duration:  \* Seconds, 0 means no lock while -1 means permanent lock.

Consecutive Failed SMS: This is only valid if a consecutive Failed SMS

Other : Please refer to 7.11.4 for instructions

### 7.9.17 Accumulated Received SMS Count Checking

Accumulated Received	<input checked="" type="checkbox"/> Enable	
SMS Count Checking:		
Reset When Switching:	<input checked="" type="checkbox"/> Enable	Reset the cond when any other cond is reached.
Accumulated Received	<input type="text" value="1"/>	
SMS Count:		
SMS Content Keywords:	<input type="text" value="You have fully consumed yi"/>	
SMS sending number:	<input type="text" value="DITO"/>	
Locking Duration:	<input type="text" value="-1"/>	Seconds, 0 means no lock while -1 means permanent lock.

This function locks the SIP card after receiving the text message with the specified content sent by the specified number, for example, lock the SIM card according to the prompt message of insufficient balance!

Accumulated Received SMS Count: Number of SMS received

SMS Content Keywords: The keyword of the SMS content, the SMS with this content will be considered to meet this condition!

SMS sending number: It must be the text message sent by this sender to identify the SMS content

Other : Please refer to 7.11.4 for instructions

### 7.9.18 Reasons for SMS module error

Reasons for SMS module error:	<input checked="" type="checkbox"/> Enable	
Module error code:	<input type="text" value="500"/>	* The reason for multiple module error codes is used; to distinguish
Release Cause Times:	<input type="text" value="3"/>	

Module error code: When the error code is returned for the specified number of times during the sending of the SMS, the SIM will be locked!

### 7.9.19 Port Inter call Checking

Port Inter Call Checking:	<input checked="" type="checkbox"/> Enable	
Reset When Switching:	<input type="checkbox"/> Enable	Reset the cond when any other cond is reached.
USSD Query:	<input type="checkbox"/> Enable	Send USSD query command before switching.
Switch When Reached:	<input checked="" type="checkbox"/> Enable	If disabled, only lock the SIM.
Port Inter Calls:	<input type="text" value="2"/>	
Locking Duration:	<input type="text" value="30"/>	Seconds, 0 means no lock while -1 means permanent lock.

This function is used to detect the number of times the ports hit each other, lock or lock and switch SIM cards when the conditions are met !

## 7.10 SIM Pool Setting

The setting here is to allow the device to run on the SIM card that receives the SIM card (the SIM card is no longer required on the MoIP). SIM card installed on SIMBANK. SIMBANK through the Internet SIM card will be transferred to the use of MoIP. MoIP and SIMBANK can be used across countries and regions.

The screenshot displays two configuration panels for SIM Pool settings. The 'Basic Settings' panel includes dropdowns for 'SIM Poll' and 'Registration', both set to 'Enable'. It also features input fields for 'Server Address', 'Username', and 'Password', and a 'Status' label. The 'Other Settings' panel includes dropdowns for 'SIM Allocation Mode' (set to 'Active'), 'Use Local Policy' (set to 'Disable'), and 'Signal Transport' (set to 'UDP'). Both panels have 'Submit' and 'Reset' buttons at the bottom right.

Registration: This means registering with the SIM server

Server Address: Please enter the SIM Server server IP

Username: Please fill in the account from SIM Server

Password: Please fill in the Password from SIM Server

Status: If the registration is successful, it will prompt ok

SIM Allocation Mode: Active mean that MoIP voluntarily applied for a SIM card to SIMServer / SIMBANK

Use Local Policy: When enabled, the settings for MoIP Automation will take effect, and the Automation settings will be obtained from SIMServer when disabled

Signal Transport: When UDP is unstable, you can try TCP

## 7.11 Inter Call Setting

### 7.11.1 Port Inter calling

The screenshot below shows the operation mode to set globally for port inter- Send SMSing.

Fields are specified as following:

- Port Inter calling: Specify whether enable port Inter calling.
- Min Send SMS Duration: Specify the minimum Send SMS duration.
- Max Send SMS Duration: Specify the maximum Send SMS duration.

This panel allow SIMs in the gateway to Send SMS each other randomly. Consider that SIMs inside only Send SMS out all the time, so it's easy to be judged as an illegal use.

When enable "Port Inter calling", every SIM can receive income Send SMS in period which is custom option in "Conditions Settings".

### 7.11.2 Conditions Settings

The screenshot below shows the operation mode to set conditions settings of port Inter calling.

Fields are specified as following:

- By Device Online Time: Gateway will start port Inter calling by the device online time, and the time between min interval and max interval.

- Consecutive Failed Send SMS: Gateway will start port Inter calling when reaches the consecutive failed Send SMS.
- By Consecutive: Gateway will start port Inter calling when reaches the consecutive Send SMS.
- Total Send SMS Duration: Gateway will start port Inter calling when reaches the Send SMS duration.

According to the actual situation, input the reasonable numerical.

## 7.12 SIM Num Settings

The screenshot below shows the operation mode to get Local Number by USSD

Operator ID	Method	Content	Number Key	Service Num	Recv Num	Translation
51502	USSD					->

Fields are specified as following:

- Method: when enable it, gateway will get the SIM number by USSD command/SMS command /SIM storage
- Content: Specify the USSD command/SMS command for querying SIM number.
- Number Key : Here to fill in the SIM card number in front of a few characters (Please refer to the mobile settings inside the balance query keyword setting method)
- Prefix Translation: change the SIM number prefix(You can remove the country code, the device is displayed as local number).

The screenshot below shows the operation mode to set local number manually.( If the above methods are unable to obtain the number, you can also manually enter the number here)

Port	SIM Number			
	A	B	C	D
1A				
2A				

Fields are specified as following:

- Port No: The MoIP Gateway mobile port. Each port contains one or four card slots. Port No starts from 1 to 64.
- Number A: Specify the number for card A of the port
- Number B: Specify the number for card B of the port
- Number C: Specify the number for card C of the port
- Number D: Specify the number for card D of the port
- Number More..

### 7.13 Call back Settings

Set here, when the device receives a Send SMS, you need to return the number of the Send SMS

Port	Enable	Callback Numbers (* means all, supports up to 128 numbers seperated by comma)
1	<input type="checkbox"/>	
2	<input type="checkbox"/>	
3	<input type="checkbox"/>	
4	<input type="checkbox"/>	
5	<input type="checkbox"/>	
6	<input type="checkbox"/>	

### 7.14 Call Waiting Settings

Here, when the SIM in the device is Send SMSing, there is a GSM phone incoming, and the operator will prompt the Send SMSer to wait(This is the same as the Call Waiting in the phone)

Port	SIM Status	Enabled	Status
1		<input type="checkbox"/>	
2		<input type="checkbox"/>	
3		<input type="checkbox"/>	
4		<input type="checkbox"/>	
5		<input type="checkbox"/>	
6		<input type="checkbox"/>	

### 7.15 Auto Recharge

This item is used to configure automatic recharge settings, which need to be used with automatic recharge server(If you have server, please contact YX NOC install auto recharge software)

**Basic Settings**

Auto Recharge <sup>i</sup>:

Server Address:  \* Add ":port" to specify a special port.

Username:

Password:

Status:

Submit Reset

**Other Settings** Collapse

Min Balance:  \* If balance reached to this value, the auto-recharge will be trigger.

Submit Reset

## 7.16 Status Notification

This setting is used to push the status information of the device to the specified server!

**Basic Settings**

51566	intern.diti.ph	<input type="text"/>	<input type="text"/>

Internet Traffic Settings: This item is used to set the Internet access conditions. When the conditions are met, the Internet access operation will be performed automation Send SMS one times

URL Settings: This is used to fill in, you need to make the device visit the URLs

APN Setting: Please enter the APN you want to define in different carrier codes

## ❖ 8 SMS Setting

### 8.1 Port Setting

**SMS port settings**

	Port	Port Status	SMS Enabled	SMS Center Number
<input type="checkbox"/>	1	<span style="color: green;">●</span>	<span style="color: green;">✔</span>	<input type="text"/>
<input type="checkbox"/>	2	<span style="color: green;">●</span>	<span style="color: green;">✔</span>	<input type="text"/>

This setting can enable or disable the SMS function of the port, and set the SMS center number

## 8.2 SMS Setting

### 8.2.1 SMS Inbox

The screenshot below shows the operation mode to receive sms.

The screenshot shows the 'SMS Inbox' window with a table of received messages. The table has columns for Port, Sender, Time, Content, and Operations. There are 'Refresh' and 'Clear' buttons at the top right of the table area.

Port	Sender	Time	Content	Operations
1A	10010	10-06 13:51	温馨提示: 您5日上网流量0.00MB, 本月累计上网流量0.00MB。如需帮助, 可访问沃在线客服chat.gd10010.cn/lrts。	Details(4)
2A	10010	10-06 13:49	温馨提示: 您5日上网流量0.00MB, 本月累计上网流量0.00MB。如需帮助, 可访问沃在线客服chat.gd10010.cn/lrts。	Details(3)
3A	10010	10-06 13:52	温馨提示: 您5日上网流量0.00MB, 本月累计上网流量0.00MB。如需帮助, 可访问沃在线客服chat.gd10010.cn/lrts。	Details(3)
4B	10010	10-06 14:02	温馨提示: 您5日上网流量0.00MB, 本月累计上网流量0.00MB。如需帮助, 可访问沃在线客服chat.gd10010.cn/lrts。	Details(2)

Fields are specified as following:

- Port No: The MoIP Gateway mobile port. Each port contains one or four card slots. Port No starts from 1 to 64.
- Sender: Specify the sms sender.
- Time: Specify the sms receive time.
- Content: Specify the sms content.
- Operations: Click the Detail button to get more detail about the specify port.

The screenshot below shows the operation mode to get sms details.

The screenshot shows the 'SMS Details' window. It has a 'Collapse' button at the top right. Below the title bar, there are two dropdown menus: 'Please Select Port:' with '3' selected and 'Please Select SIM:' with 'B' selected. Below these are buttons for 'Back', 'Refresh', 'Clear', and 'Delete'. A table shows the details of a selected message.

Port	Sender	Time	Content	Operations
<input type="checkbox"/> 3B	10011	10-03 19:01	Your AC Balance Rs. 100. Dial *344# to check balance...Rs300 Top-up cards now available in retail shops!	<input type="checkbox"/> Reply <input type="checkbox"/> Delete

Fields are specified as following:

- Please Select Port: Specify the port.
- Please Select SIM: Specify the sim.
- Port: Specify the port.
- Sender: Specify the sms sender.
- Time: Specify the sms receive time.

- Content: Specify the sms content.
- Back: Back to the SMS content web page.
- Refresh: Refresh the web page.
- Clear: Clear the sms.
- Reply: Reply the sms
- Delete: Delete the corresponding sms.

## 8.2.2 SMS Settings

The screenshot shows the 'SMS Settings' configuration page. It contains the following fields and options:

- Sending Interval:** Two input boxes, both containing '0', with a '-' sign between them. A note says '\* Seconds'.
- SMS Format:** Radio buttons for AUTO (selected), PDU, TXT, and ISO8859-1.
- Status Report:** Radio buttons for Disabled (selected) and Enabled.
- Sms Send Max Length:** Input box with '0'. Note: '\* Default 0 is not limited, the unit: byte'.
- Sms Send Max Count:** Input box with '0'. Note: '\* Default 0 is not limited'.
- Sms Send Over Flow:** Dropdown menu with 'Refuse' selected. Note: '\* Default rejection'.
- Proc:** A label with a dropdown menu.
- Count rule:** Input box with '0-0-140-6'.
- Forward Protocol:** Dropdown menu with 'GSM' selected.

**Sending Interval:** Please set the sending interval you need. When the time is set to a certain period of time, it will be sent at a random time within this time range.

**Status Report:** When successfully sent or receiver have received, you will receive a successful notification SMS (This feature depends on carrier support)

**Other settings:** if you are not familiar with it, please keep the default!

## 8.2.3 Scheduled Sending

This function is set to send SMS automation Send SMS

Fields are specified as following:

- Content: Specify the sms content.
- Recipients: Specify the recipients. Semi-colon can be used to separate multiple receivers.
- Send To Local SIM: Enable this feature and set the local SIM's number, the inter port will send sms.
- By Duration: Gateway will start sms sending by the device online time, and the time between minimum minutes and maximum minutes.
- By Consecutive Failed Send SMS: Gateway will start sms sending by consecutive failed Send SMS.
- By Consecutive Send SMS: Gateway will start sms sending by consecutive Send SMS.
- By Send SMS Duration: Gateway will start sms sending by Send SMS duration.

The screenshot below shows the operation mode to send SMS through the MoIP Gateway.

- Select port. The module here means MoIP mobile port and the SMS is sent out through the card which is in service on this port.
- Input the receivers separated by semi-colon.
- Input SMS content and click button send to send out the SMS.

- Field Received SMS is used to display the last response of the SMS sent out, if the response is not empty.
- Field Successful SMS Number records down the total number of SMS which is successfully sent out. Field Failed SMS Number records down the total number of SMS which is sent failed.

## 8.3 SMS Forward

### 8.3.1 Email to messages

This function is used to set up to send a short message according to the content of the email when an email is received!

### 8.3.2 SMS to HTTP

The screenshot below shows the operation mode to set HTTP protocol of forwarding SMS.

Fields are specified as following:

- Forward Protocol: Specify the forward protocol HTTP(POST/GET).
- URL: URL to receive this SMS push on your server!
- Username: If you need ,Specify the username.

- Password: If you need ,Specify the password.
- Sender: the sender who receives the SMS.
- Receiver: If you need ,Specify the receiver.
- Device Port: The port number to receive this SMS in device.
- Charset: Specify the charset, UTF-8/BASE64/PDU.
- Content:SMS Content.

### 8.3.3 Basic Settings

**Basic Settings**

Forward Protocol ⓘ : GSM

Submit Reset

**Port Application Feature**

Port No.	Forward Number	SMS Center
1	<input type="text"/>	<input type="text"/>

Forward Protocol(GSM):

This feature forwards text messages to another mobile phone user

- Forward Number: Please enter the mobile number you want to forward to.
- SMS Center: SMS center number.

**Basic Settings**

Forward Protocol ⓘ : SIP

Server IP:  \* If set to empty, the SMS will be sent to SIP server.

Content-Type: text/plain \* the full content type of SIP MESSAGE body.

Content Charset: UTF-8

Submit Reset

Forward Protocol(SIP):

- Forward Protocol: Specify forward protocol sip.
- Server IP: Specify the sms server ip.
- Content-Type: Specify the Content-Type.
- Content Charset: Specify the content charset.

**Basic Settings**

Forward Protocol:

Content Before:

Multiple Port:

Sender:

Password:

Recipient:

Global Subject:

\* Email Account  
\* Email Password  
\* Multiple recipients, separated by commas

Forward Protocol(Email):

- Content Before:Format, Disable:content will in front; Enable:content at the end.
- Multiple Port:Set by every ports.
- Sender: Email account (The device will log in to this mailbox, and then send an email containing SMS content to the specified email address through this mailbox.).
- Password: Email password.
- Recipient: Receive SMS content email address
- Global Subject: Email Subject.

## 8.4 SMS Ctrl Setting

**Basic Settings**

SMS Ctrl Mode:

SIM Exhaust Operation:

Only Successful SMS:

Set by Each Port:  \* Using variable limitation for each port.

Max SMS:  \* to use this feature, please set the NTP server.

Max SMS / Day:  \* to use this feature, please set the NTP server.

Max SMS / Month:  \* to use this feature, please set the NTP server.

**SMS Statistics**

Data List

<input type="checkbox"/>	Port	Status	Total SMS	Remain	Daily SMS	Remain	Monthly SMS	Remain	Operations
<input type="checkbox"/>	1H	<span style="color: green;">●</span>	<input type="text" value="1524"/>	Unlimited	<input type="text" value="274"/>	<input type="text" value="222"/>	<input type="text" value="770"/>	Unlimited	<input type="button" value="Reset"/>
<input type="checkbox"/>	2H	<span style="color: green;">●</span>	<input type="text" value="1510"/>	Unlimited	<input type="text" value="272"/>	<input type="text" value="224"/>	<input type="text" value="768"/>	Unlimited	<input type="button" value="Reset"/>
<input type="checkbox"/>	3H	<span style="color: green;">●</span>	<input type="text" value="1516"/>	Unlimited	<input type="text" value="270"/>	<input type="text" value="226"/>	<input type="text" value="766"/>	Unlimited	<input type="button" value="Reset"/>

Switch SIM: When the sent SMS reached the maximum. It will switch to next SIM card

Set by Each Port: Using variable limitation for each port. When this setting is enabled, set each port separately, If set is "0" , this is not enabled

Max SMS: The maximum total number of sent (Need to set the time server, and read the local time correctly)

Max SMS / Day: One day the maximum total number of sent

Max SMS / Month: One Month the maximum total number of sent

**SMS Statistics:** Here will be Statistics all ports to send SMS data situation(Reset button to reset the sending status of this card) **This data will be stored in the sim card**

## 8.5 SMPP Setting

**Basic Settings**

SMPP ⓘ:  Port:  \*Add ':port' to specify a special port.

**Data List** Add Delete

<input type="checkbox"/>	SMPP Account	Password	Yield Code	Report Code	Dest Addr	TON	Status
No Data							

Submit Reset

---

**Advanced Settings**

Forward Sms:  Sms Report Msg Type:

Submit Response:  Submit Timeout:  \* Minutes

Report Response:  Report Timeout:  \* Minutes

Auto Clip Routing:

Fail Retry:  Max Queue Size:

Retry Codes:

Submit Reset

---

**Translation List**

**Data List** Add New Delete

<input type="checkbox"/>	Callee Prefix	Digits Stripped	Digits Added	Operation
No Data				

SMPP Protocol version 3.4, TOP: This option will be added to provide the user to report on this parameter

CLIENT: Please set the "account" "password" "IP" and "port number" from the SMPP server ,

Sms Report: If you need sms report, please enable this setting, generally please keep it enabled

If the registration is successful, the status will prompt green "transceiver"

SERVER(This mode depends on the public IP, This mode can be used to connect to the SMPP platform, and the device will send the SMS from the SMPP platform through the SIM card): Please set the “account” “password” and “port number” and let the client settings same and registration to MoIP

Sms Report: If you need sms report, please enable this setting, generally please keep it enabled If the registration is successful, the status will prompt green “transceiver”

## 8.6 EIMS Setting(SMS Server Registration)

This setting can be used to running the network SMS business, which needs to be connected to the SMS Server IMFS or EIMS system. you can also contact your account manager and provide us with an SMS route. We will run the network SMS business together.

Please provide the device's MAC to the SMS partner company.

Server Type: Please select EIMS to run SMS Business.

Server Address: IMFS/EIMS SMS Server IP (Please get it from your SMS business partner company)

User Name: Register account (Please get it from your SMS business partner company)

Password: Register password (Please get it from your SMS business partner company)

Registration Status: When it displays OK, it is register success

The screenshot shows a 'Basic Settings' window with the following fields:

- Server Type: EIMS (dropdown)
- Server Address: abcdefghijklmn.com (text input)
- UDP/TCP: UDP (dropdown)
- User Name: YX123456789 (text input)
- Password: \*\*\*\*\* (password input)
- Registration Status: OK (text)

A note next to the Server Address field says: \* Add ':port' to specify a special port.

Buttons: Submit, Reset

## 8.7 SMS Prefix Route

This setting is used to limit the prefix of the number when running the network SMS business to ensure that the number number conforms to the sending rule of the SIM card.

This setting only support SMPP connect , This setting is used to limit the prefix of the number when running the network SMS business to ensure that the number number conforms to the sending rule of the SIM card.

The screenshot shows a 'Basic Settings' window with the following fields:

- Prefix Route: Enabled (dropdown)
- Data List:
 

	Country Code	Operator ID	Receive Number Prefix
1	86	46001	0132,0131

Buttons: Add New, Delete, Submit, Reset

## 8.8 SMS Filter

**SMS spam filter**

SMS spam filter:

Number prefix blacklist:  \* Multiple numbers separated by semicolons

Sensitive Word:  \* Multiple sensitive Word separated by semicolons

**SMS Trash Box**

SMS List

Port	Sender	Time	Content	Operations
1H				<input type="button" value="(Details0)"/>

This function is used to filter the received spam text messages, and the filtered text messages will not appear in the inbox

## ❖ 9 System Setting

### 9.1 Voice and Codec

The screenshot below shows the operation mode to set codec priority.

Voice Codec Priority:

\* Choose one coding, click "Up" or "Down" to adjust priority. The highest codec has the first priority.

Three codec types are provided to adjust MoIP Gateway to different network environment. It support G729a/b/e,G723.1,G711A/U law,iLBC,AMR auto- selecting.

The screenshot below shows the operation mode to set voice settings.

**Voice Settings**

**Voice Volume:**

Input Volume:       Output Volume:

DTMF Volume:

**Dial Tone**

High Frequency:       Low Frequency:

On Duration:       Off Duration:

**Ringback Tone**

High Frequency:       Low Frequency:

On Duration:       Off Duration:

**Busy Tone**

High Frequency:       Low Frequency:

On Duration:       Off Duration:

Voice Volume is used to specify the input voice volume, output voice volume and DTMF tone volume. The acceptable value for volume is an integer no less than 10 and no greater than 40.

The Dial Tone is sent to a customer or operator to indicate that the receiving end is ready to receive dial pulses or DTMF signals. It is used in all types of dial offices when the customer's or operator's dials produce dial pulses.

A Ring Back tone (or ringing tone) is an audible indication that is heard on the telephone line by the Send SMSer while the phone they are Send SMSing is being rung. It is normally a repeated tone, designed to assure the Send SMSing party that the Send SMSed party's line is ringing.

The Busy Tone indicates that the Send SMSed customer's line has been reached but that it is busy, being wrong, or on permanent signal. When an operator applies a busy signal, it is sometimes Send SMSed a busy-back tone. Line Busy Tone is a Low Tone that is on and off every 0.5 second.

The settings of Dial Tone, Ring Back Tone and Busy Tone depend on area. The default settings for Asia are shown in the screenshot above for reference.

## 9.2 Network Debug

The screenshot below shows the auto ping settings

**Start Ping on device up**

Auto Ping :  Disabled  Enabled

IP:

Package Size:

Last Time:       \* Seconds, 0 means pinging all the time.

Package Lost Rate:       \* Device will restart if actual package lost rate is lower than this value.

Fields are specified as following:

- Auto Ping: Specify whether enable auto ping, when the device power on to runing.
- IP Address: Specify the ip address.

- Packet Size: Specify the packet size.
- Last Time: Specify the ping duration.
- Package Loss Rate: Specify the package loss rate.

The screenshot below shows the manual ping settings

Fields are specified as following:

- IP Address: Specify the ip address or domain name.
- Packet Size: Specify the packet size.
- Packet Count: Specify the packet count.

The ping tool is easy to check the gateway network status. Especially when Send SMS can't connect but every SIP parameters are correct, this tool will be helpful to find out problems.

The following is used to capture packets, non-professionals, please do not operate

## 9.3 Log Settings

This item is used to set the device needs to record the log and save the relevant information can be used for engineering personnel to maintain and check the equipment status, please ignore in the normal use.

**Log File**

Logfile Count:  \* The size of single logfile is 1MB.

Dying Msg Size:  \* The dying message(dyingmsg.log) size in KB.

GDB File Count:

UTL Log Level:

**Log Modules**

POTS     CCM     SIP     SIP Message     SIP Route  
 WIRELESS     DSP     ESP     SPC     EBM  
 RC     LED     EAR

**Network Log**

Send Log To Server    Log Server:   
 Memory Monitoring    Mem Val(MB):  \*When the memory below this value,Sends monitoring information to log server.

## 9.4 File Management

This is used to export and view log files, please ignore in the normal use

**File List**

Seq.	Filename	Modification Time	Type	Size	Operations
1	messages.log	1970-01-01 00:00:30	log	173691	<input type="button" value="Delete"/> <input type="button" value="Export"/>

## 9.5 User & Device

### 9.5.1 User

The screenshot below shows the operation mode to manage system user.

User List			
<b>Data Detail</b>			
Data Status:	Account:	Password:	Privilege:
Add	<input type="text"/>	<input type="text"/>	Admin
			Submit
<b>Data List</b>			Add New Delete
<input type="checkbox"/>	Account	Privilege	Operation
<input type="checkbox"/>	root	Admin	[Edit]
<input type="checkbox"/>	user	User	[Delete] [Edit]

#### Default User

The default system user account is root. This account can't be deleted and only Password and Privilege can be modified for this account.

#### Add User

Click button Add New to expand the data input area to add new data. Fields are specified as following:

- Data status: Mark the status of current data record. Option values are Add/Edit. Value Add means the data is new while value Edit means the data is old.
- Account: The user account used to login web system. The account value can not be modified after save.
- Password: The password used to login web system.
- Privilege: The privilege of user. Option values are Admin/User.

Click button Submit on the right to save the new data record.

#### Edit User

All the user records are displayed in list. Two operations are provided on the right of each record.

Click Edit to expand the current data record to Data Detail Area which is above the Data List.

Click button Submit on the right to save the old data record.

#### Delete User

Click Delete on the right of each record to delete the current record. A message box will be popped for delete confirmation.

Another shortcut button is also provided on the top right of Data List to delete multiple selected records in batch. A message box will be popped for confirmation of batch delete.

## 9.5.2 Device Settings

The screenshot below shows the operation mode to set Device settings.

Fields are specified as following:

- Device Alias: Specify the device alias.
- Auto Reboot: Specify the auto reboot time.
- Scheduled Reboot: Specify the scheduled reboot time.

## 9.5.3 Date And Time

The screenshot below shows the operation of date and time settings.

The default time zone is UTC+8, you can change the time zone as your country. For example, Bangladesh is UTC+6, and change as +6. If your device is not touch with the internet and want to get accurate time, the time server will help.

## 9.5.4 Remote Mangement

The screenshot below shows the operation mode for remote management.

Remote Management is used to manage the MoIP Gateways located in other physical locations. Network must be available for the gateway to communicate with ERMS or ETMS Server, When the

registration is complete, you can access your device from the ERMS/ETMS server at any time/address.

(If you need an ERMS/ETMS server for remote device management, you can contact us for free installation services)

### 9.5.5 SNMP

This is the connection configuration for the SNMP protocol, which you can configure if you have an SNMP server

The image shows a web-based configuration interface for SNMP. It consists of two main sections: 'SNMP' and 'SNMP Trap Server List'.

**SNMP Configuration:**

- SNMP: Enable (dropdown menu)
- Listener Port: 161 (text input) \* SNMP listening port
- Ro Community: public (text input) \* Read community name for SNMP access
- Rw Community: private (text input) \* Community name for SNMP access
- Enterprise: 0 (text input)

Buttons: Submit, Reset

**SNMP Trap Server List:**

Data List (Add New, Delete buttons)

<input type="checkbox"/>	IP	Port	Community	Operation
No Data				

## 9.6 Role Management

The screenshot shows a web interface titled "Role list" with a "Collapse" button in the top right. Below the title is a "Data List" section with an "Add" button. The main content is a table with the following structure:

Role Name	Home	Permit	Operation
Admin	System Stati ▼	All Permit	
		<input checked="" type="checkbox"/> Call Status <input checked="" type="checkbox"/> Device Status <input checked="" type="checkbox"/> System Status <input checked="" type="checkbox"/> Traffic Statistics <input checked="" type="checkbox"/> Media Statistics <input checked="" type="checkbox"/> SMS Statistics <input checked="" type="checkbox"/> InterCall Statistics	
User	System Stati ▼	<input checked="" type="checkbox"/> USSD Setting <input checked="" type="checkbox"/> SIMPOOL Setting <input checked="" type="checkbox"/> SIM Num Settings <input checked="" type="checkbox"/> Callback Setting <input checked="" type="checkbox"/> Callwait Setting <input checked="" type="checkbox"/> Auto Recharge <input checked="" type="checkbox"/> Status Notification <input checked="" type="checkbox"/> Internet Settings <input checked="" type="checkbox"/> SMS Ctrl Setting <input checked="" type="checkbox"/> SMPP Setting <input checked="" type="checkbox"/> Log System <input checked="" type="checkbox"/> Module Update	

At the bottom right of the interface are "Submit" and "Reset" buttons.

Add: You can add and configure permissions, which can be assigned to the corresponding user when completed.

Role Name: The default is Admin and User, If you need to configure related permissions, you need to add a Role

Home: The default home page is displayed

Permit: The list of permissions this role can use

## 9.7 Update/ backup & Restore

The screenshot below shows the operation mode for system update/restore.

**Import File**

File Type:  ▼

File Name:  浏览... Submit Cancel

---

**Export Configuration**

Click 'Export' button to export the configuration. Export

---

**Restore To Factory**

Click 'Restore' button will restore system to factory settings. Restore

## System Update

The content for system update includes:

- firmware
- configuration
- ramfs
- kernel
- uboot
- debug tools
- voice prompt
- voice cfg
- mac file
- lic file
- customized

The configuration fields are specified as following:

- File Type: Specify the content to update. Option values are listed above.
- File Name: Specify the content file name. Click button Browser and then select the target file from the popped file selection window.

## Export Configuration

Click 'Export' button to export the configuration

## Restore To Factory

System restore is used to restore the system to default settings. A message box will be popped for the confirmation of restore.

## Firmware Version :

**Please contact your account manager to get it!**

## 9.8 Save & Reboot

Generally, any modification should require the reboot of MoIP Gateway to bring the modification into effect. However, single Save without Reboot is also frequently used to save the modifications which will be effective on next reboot of MoIP Gateway.

The screenshot above shows the operation buttons. Button Save is used to save all the modifications while button reboot is used to save modifications first and then reboot device immediately.

## ❖ 10 Typical Used Scenario

This chapter presents some typical used scenarios for reference.

### 10.1 Landing from IP to Mobile Network

MoIP Gateway is now used more and more for telephone carriers to land their IP Send SMS to mobile network. It plays the role of converting IP telephone signal to GSM telephone signal, relaying the media stream between IP network and Mobile network.

MoIP Gateway can be placed either in the LAN of SMS platform server or in public network environment which can be accessed by SMS platform server through public IP in different physical location.

### 10.2 Access from Mobile Network to IP

MoIP Gateway can be used as the access from mobile network to IP, can send and receive SMS/MMS & Email. Any Send SMS made to the mobile card inserted into MoIP Gateway will be routed to IP network and connected to SMS platform server. The SMS platform server can redirect the Send SMS to final destination user.

## ❖ 11 HTTP API

### 11.1 Send SMS

#### 11.1.1 GET HTTP

URL format is like this :

`http://host:port/goip_send_sms.html?port= device port&username= device login  
username&password= device login password&charset=utf8&recipients= recipient number&sms=  
SMS content`

**host:port:** Gateway IP address and Port(if do not fill in the default 80)

**port:** specify which port send the sms out, if don't have this option, it will random choose 1 idle port.

**username:** device login username

**password:** device login password

**charset:** the SMS content code。utf8, gb2312 available, default is utf8

**recipients:** the SMS receiver, separate with ";" if send multiple receiver

**sms:** the SMS contents.

**for example:**

`http://1.1.1.1:8080/MoIP_send_sms.html?port=16&username=root&password=root&charset=utf8&recipients=10010&sms=cxye`

#### 11.1.2 POST HTTP

URL format is like this :

`http://host:port/goip_post_sms.html?username= device login username&password= device login  
password`

**username:** device login username

**password:** device login password

Parameter Content-Type in HTTP head should set to 'application/json;charset=utf-8'

**POST data:** `{ "type": "send-sms", "task_num": n, "tasks": [ { "tid": tid_1, "to": PhoneNumber, "sms": content }, ... , { "tid": tid_n, "to": Receiver Number, "sms": content }, ] }`

**n:** Total number of tasks for this API;

**tid\_1/tid\_n:** Task sequence number: any number can be filled in;

**PhoneNumber:** Receiver Phone Number;

**Content:** SMS message content;

Send Success Back: for example:

```
{"code":200,"reason":"OK","type":"task-status","status":{"tid":98,"status":"0 OK"}}
```

## 11.2 Receive SMS

HTTP URL format is like this :[http://host:port/goip\\_get\\_sms.html?username= device login username&password=device login password &sms\\_id=xxx&sms\\_num=xxx](http://host:port/goip_get_sms.html?username=device login username&password=device login password &sms_id=xxx&sms_num=xxx)

host:port: Gateway IP address and Port(if do not fill in the default 80)

sms\_id: From which SMS began to receive (default 1, it mean Device receive the first SMS start)

sms\_num: receive SMS amount (default 0 ,it mean receive all SMS )

Received All SMS:

[http://host:port/goip\\_get\\_sms.html?username=device login username&password=device login password](http://host:port/goip_get_sms.html?username=device login username&password=device login password)

For received SMS:

To report: "code SCTS," code of 0 indicates success arrived, utf-8

Ordinary message: utf-8 BASE64 encoding

## 11.3 USSD

### 11.3.1 HTTP Send URL

[http://host:port/goip\\_send\\_ussd.html?username=root&password=root&port=1&ussd=\\*123%23](http://host:port/goip_send_ussd.html?username=root&password=root&port=1&ussd=*123%23)

(Click on the link above or fill in this url in the browser, or send through the java program

host:port: MoIP IP address, if have set port ,please add it(default 80)

username: device username

password: device password

port: specify which port send the sms out, if don't have this option, it will random choose 1 port.

ussd: the ussd contents (if your ussd have #,please use %23 instead)

### 11.3.2 HTTP back:

**Demo:**

```
{code:0,reason:"OK",resp:"your balance is 100.00$"}
```

code: back code

reason: ussd send status

resp: ussd contents.
